Dana Mace - SDI 1212 - Project 4 - Flowcharts

December 13, 2012

EXTRA CREDIT: My Flowchart/Logic in Project 3 was : "Fair (4/10pts) The logic of the flowchart does not match the logic of the code. Remember that the last thing in the flowchart is the terminator symbol, so outputs should not follow that symbol. Also, while a conditional may return a Boolean whether it's true or false, you should indicate is true is returned for a true outcome and if false is returned for the false outcome."

I tried to fix all those mistakes in this one. I think I got them all...

EXTRA CREDIT: My Flowchart/Completeness in Project 3 was : "Fair (6/15pts) Missing several of the required elements."

I did my best to cover all the bases this time and make sure I met all the requirements...

EXTRA CREDIT: My "Flowchart/Support in Project 3 was: "Details: Fair (4/10pts) Additional support details, including function/method names in the terminators and variable names, would make your flowchart more readable."

I included the names of the vars, arguments, and terminators to make it more readable...
